Koi fish are sensitive to the sun. As weird as it may sound they may get sunburns if they live in the ponds that do not provide enough shadow. Like most fish, koi reproduce through spawning in which a female lays a vast number of eggs and one or more males fertilize them. Koi will produce thousands of offspring from a single spawning. But the large majority of these offspring, even from the best champion-grade koi, will not be acceptable as koi (they have no interesting colors) or may
