Using the methods developed in class: Step 1: Multiply both sides by the partition function $H = \sum_j e^{-E_j + pV_j}$. Step 2: Get the temperature derivative at constant (N, P) (The conjugate variable to H in this case) $H^{-1} \frac{\partial H}{\partial T} = \frac{1}{T} \sum_j (E_j + pV_j) e^{-E_j + pV_j} = \frac{1}{T} \langle E + pV \rangle$.

McQuarrie's Statistical Mechanics is a classic textbook in the field and, although it was first published in 1976, is still widely used in courses and consulted by researchers. A strong part of the appeal of the book are the numerous problems that accompany each chapter. However, no solution manual is available.

We give some schematic solutions of exercises from chapters 1 to 10 of "Introduction to Statistical Physics", by Silvio R. A. Salinas, – rst published by Springer, New York, in 2001. We also add a number of corrections and some new exercises. Additional corrections and suggestions are warmly welcomed. Silvio Salinas

This instructor ' s manual for the third edition of Statistical Mechanics is based on RKP ' s instructor ' s manual for the second edition. Most of the solutions here were retypeset into TeX from that manual. PDB is responsible for the solutions of the new problems added in the third edition. The result is a manual

Statistical mechanics in itself can
be a bit difficult to understand, but
McQuarrie is one of the best
authors I have come across. I'd
definitely recommend this book
because it really goes in depth
with explaining stat mech but in
such a way that you'll be able to
follow!
