Case 2. This patient was 22 at the time of his Thorotrast ventriculogram in 1938 and his early history was recorded by R Hughes in 1953. 7 He had initially presented to an ophthalmologist in 1938 with a three-month history of headache, and was found to have mild bilateral papilloedema but apparently no other abnormality. After lumbar air-encephalography had shown displacement of both frontal ...

First and foremost, it is important for practitioners of the computational modeling approach to not fall into the trap of creating elegant simulation models as an end in itself. Agent-based computational models are simply one of many means that one might use to examine social phenomenon.They can do some heavy lifting of working through the implications of large numbers of individual agents ...

First and foremost it is important for practitioners of ...

Background. Penetrating spinal cord injuries (PSCI) are relatively rarely observed effects of traumatic incidents. Stab injuries of the neck usually affect young adult males, but they seldom penetrate into the vertebral canal and affect the spinal cord [44, 56, 72].The largest series of cases was reported from South Africa [], where these incidents account for approximately 25 % of all back ...
